In the box

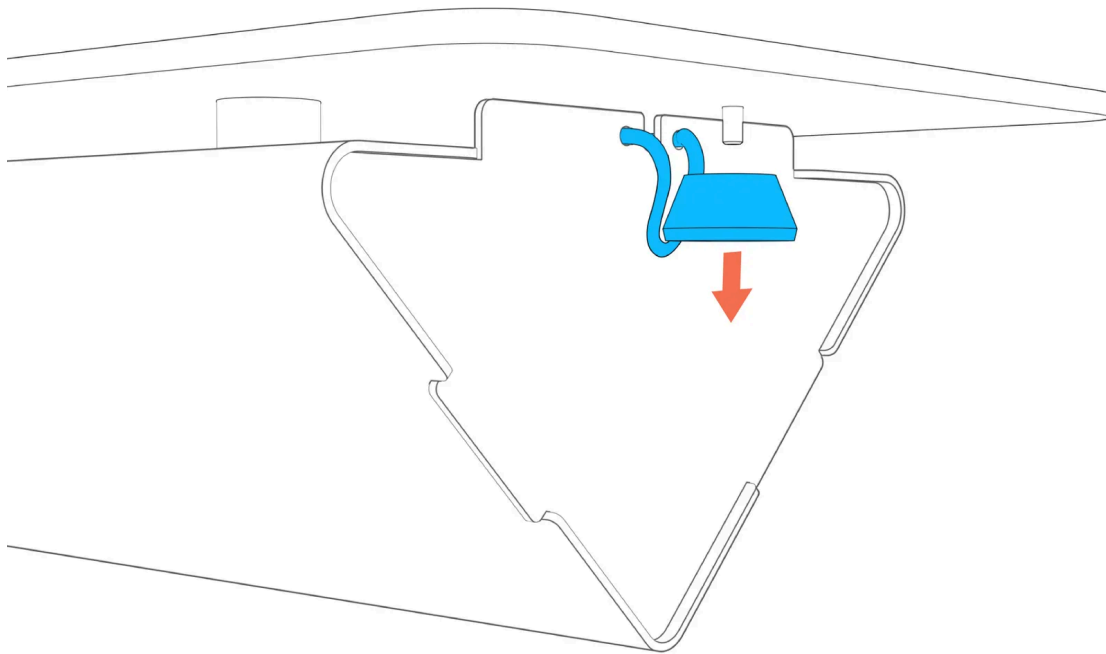

- a. 1 x Shelf top (R1021)
- b. 2 x Main Body (R1022)
- c. 4 x Cable Manager (P118)
- d. 4 x Thumb Screw Collar (P138)
- e. 2 x M8 Thumb Screw (P137, F003)
- f. 4 x Anchor (P136, F212, F216)

Install mounting anchors

Remove shelf top

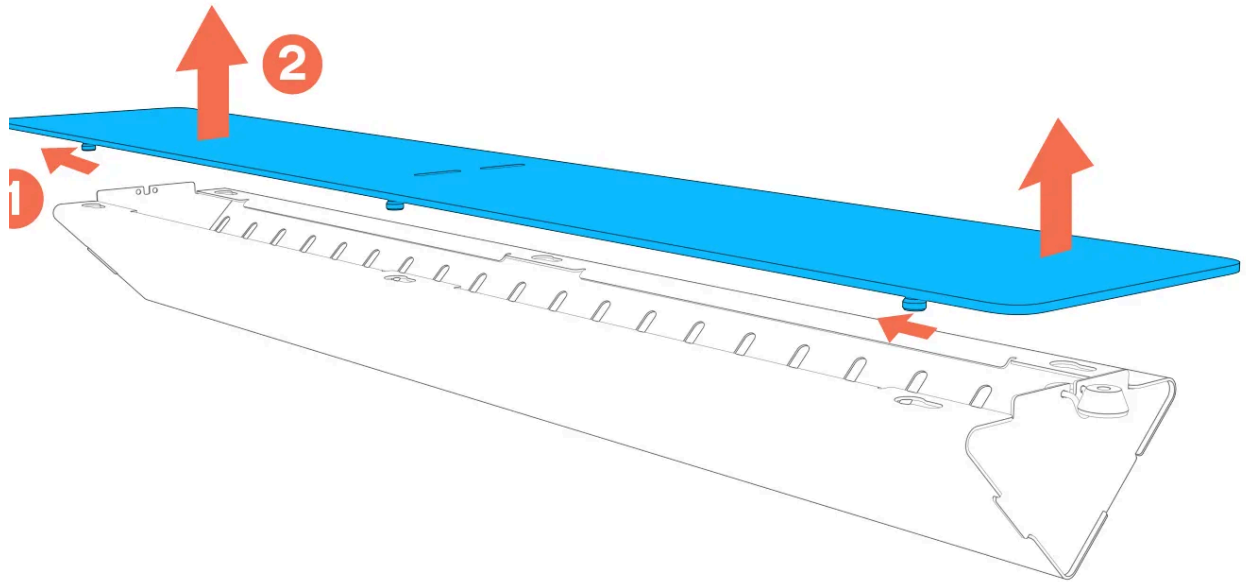

Pull the shelf-stopper from the underside of the shelf top. Removing the stopper enables the shelf top to be removed from the main body.

Slide the shelf top laterally, in the direction away from the shelf-stopper.

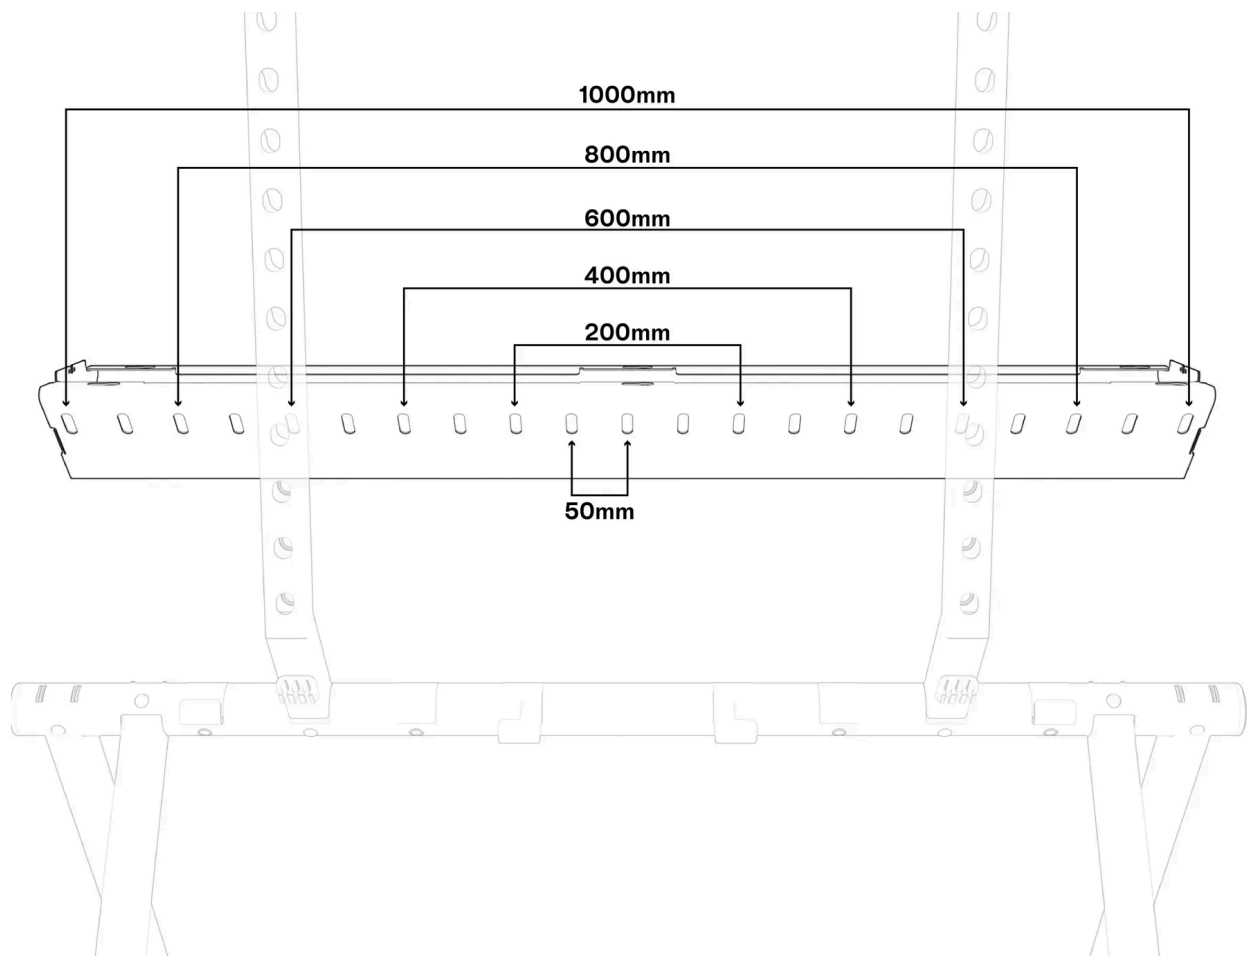

💡 The shelf top is mounted to the main body with six, grippy, urethane standoffs. You may need to bump the end of the shelf top to initiate removal.

Lift the shelf top from the main body.

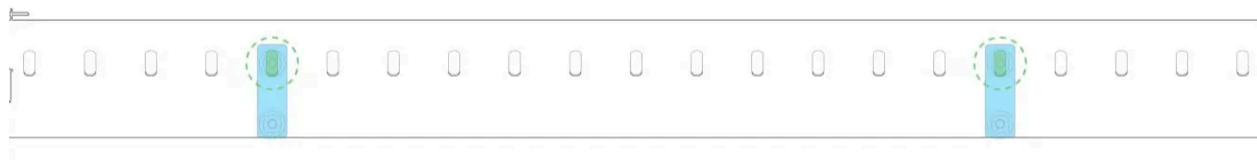

Verify anchor mounting locations

Note which mounting slots on the rear surface of the tray correspond to the columns on your Heckler rolling stand.

Fasten anchors to tray

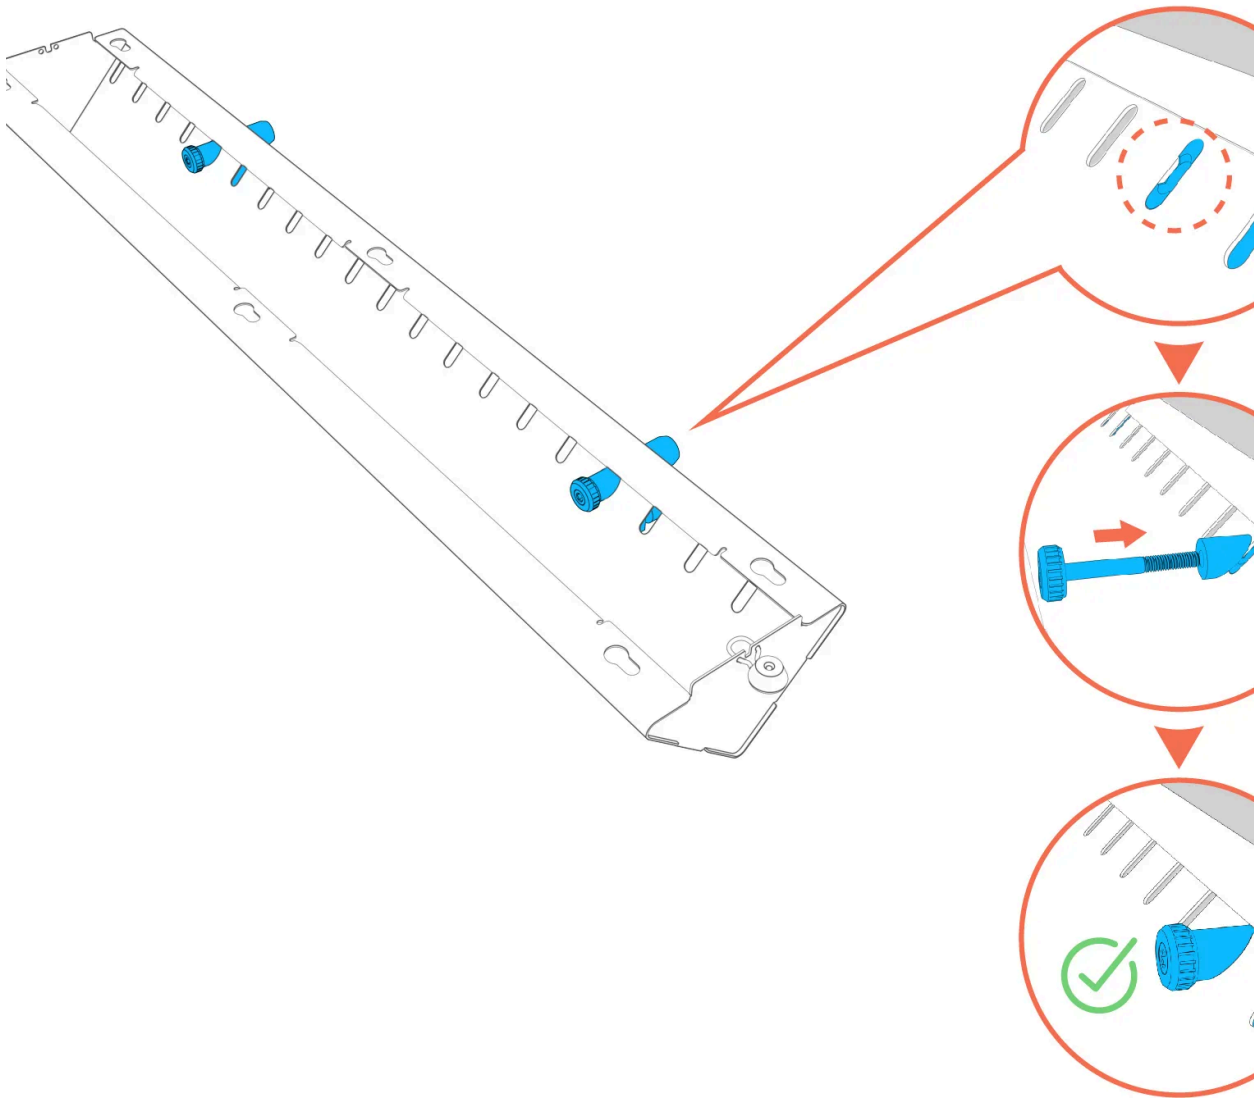

Snap the two mounting anchors into the desired mounting slots.

Ensure each extrusion is fully inserted into the mounting slot.

From the inside of the tray, insert the thumb screw collar and thumbscrew as illustrated.

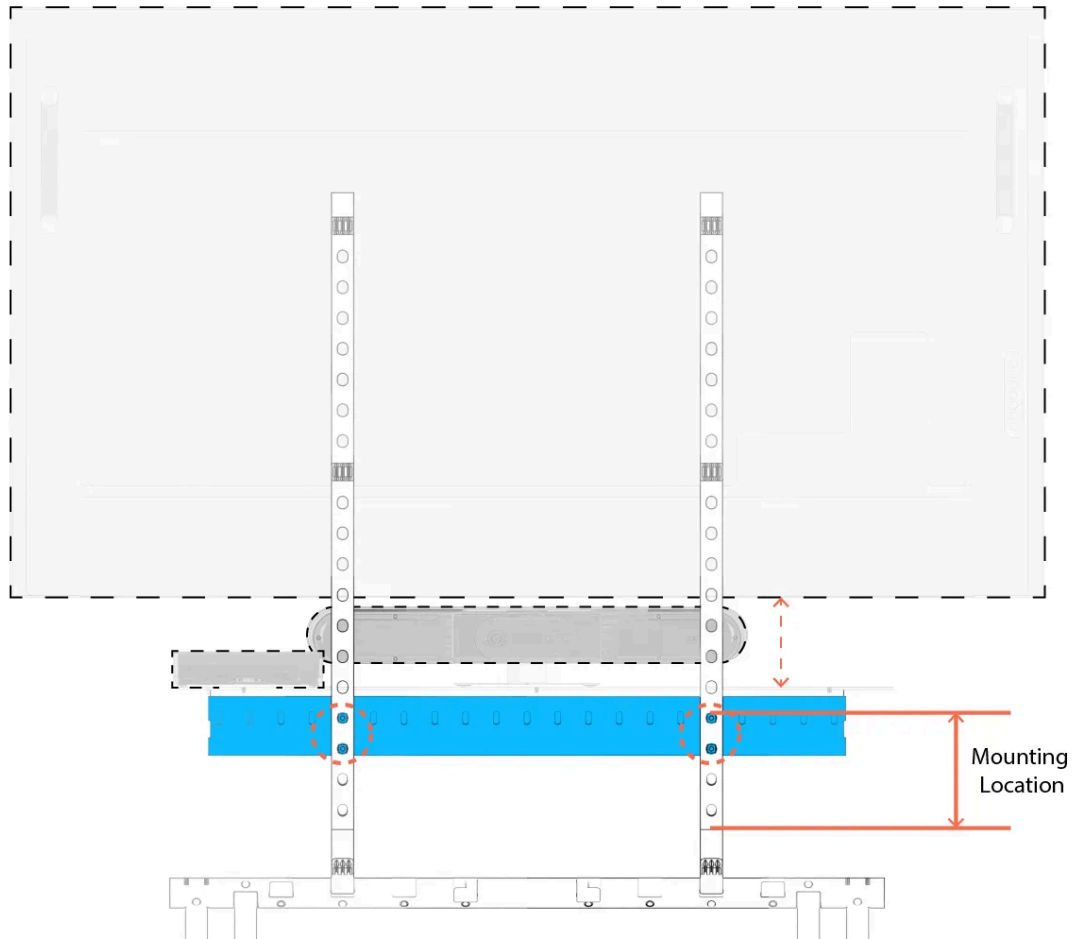

Hand-tighten the thumbscrews.

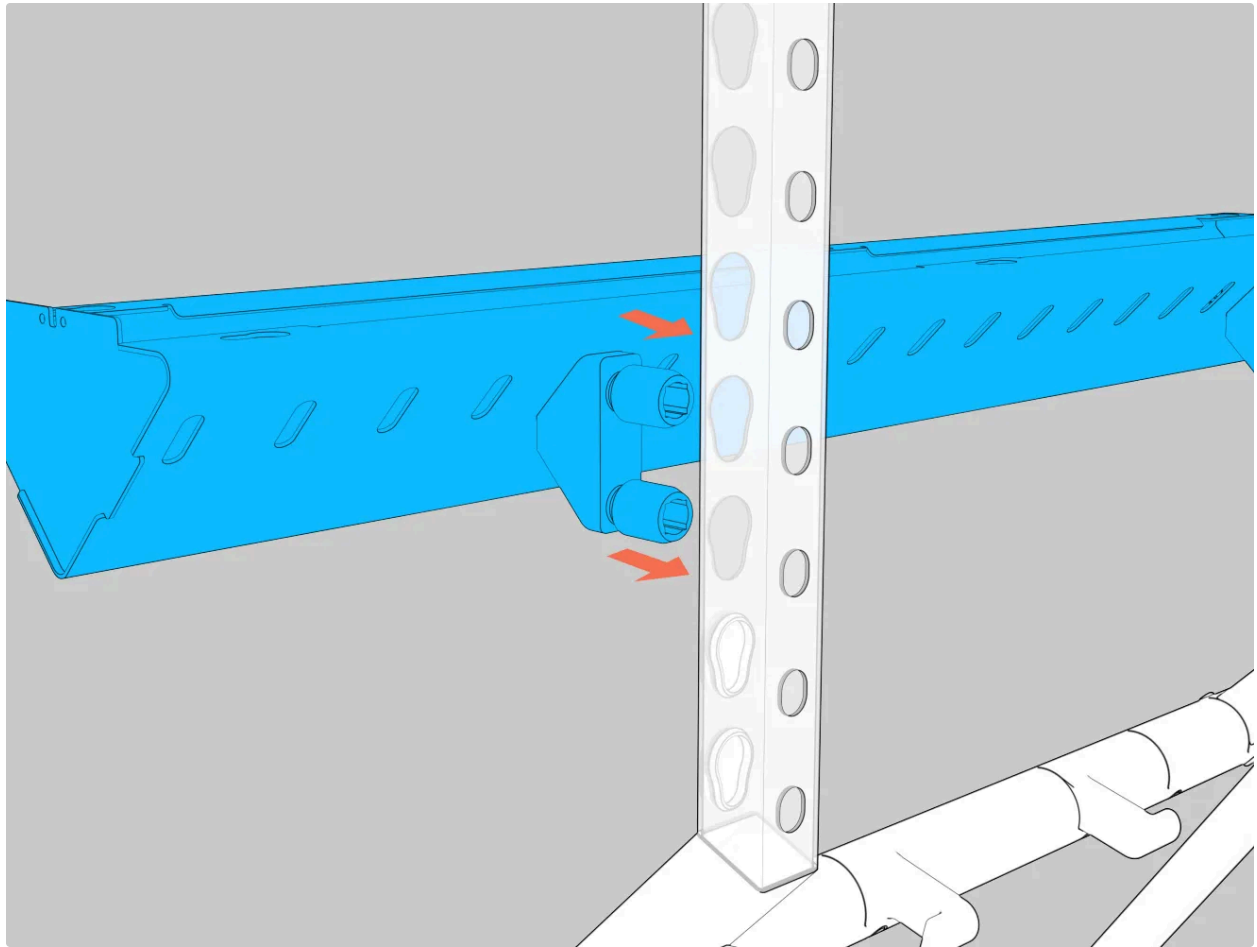

Install tray to the rolling stand

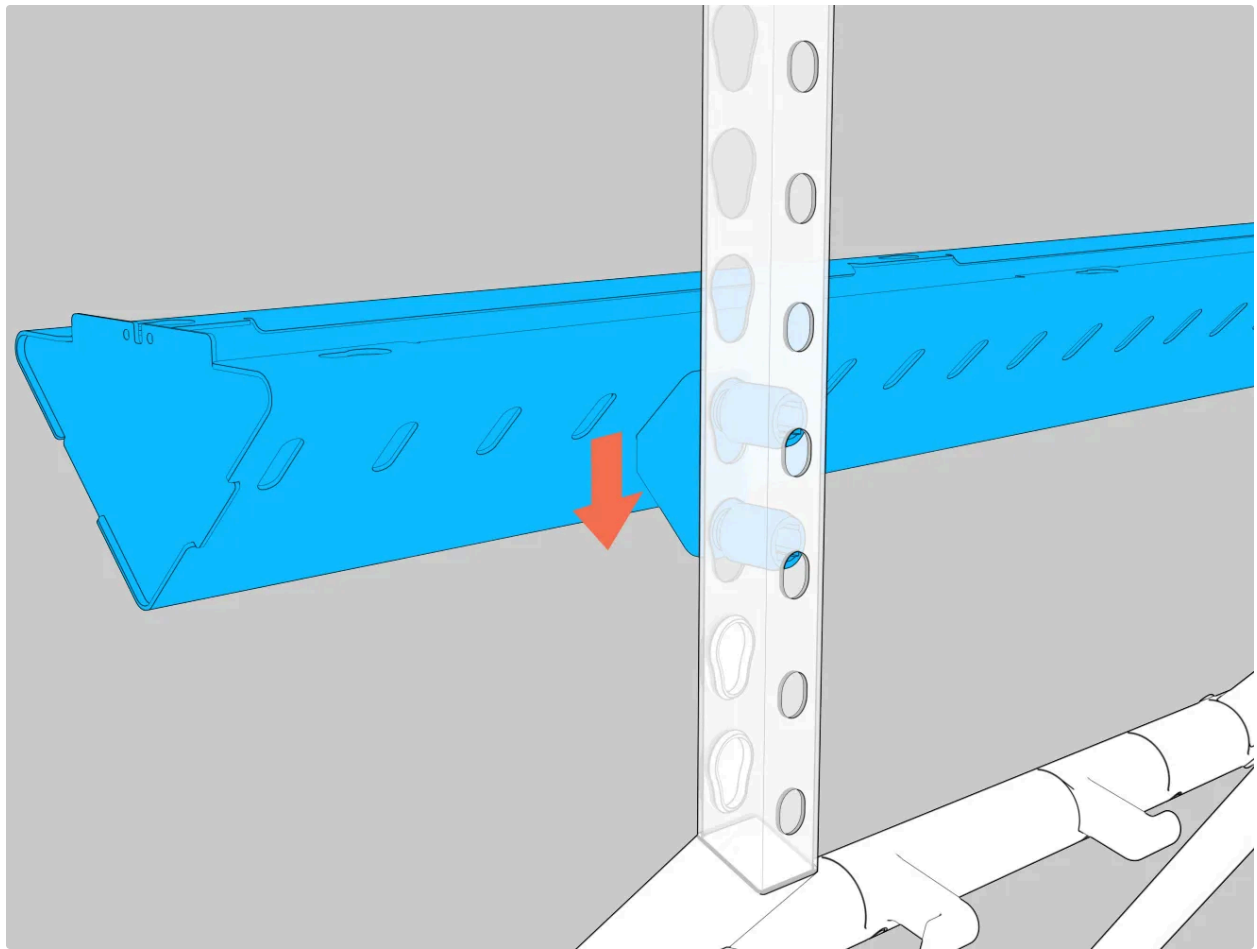

Select your desired mounting height for the hub.

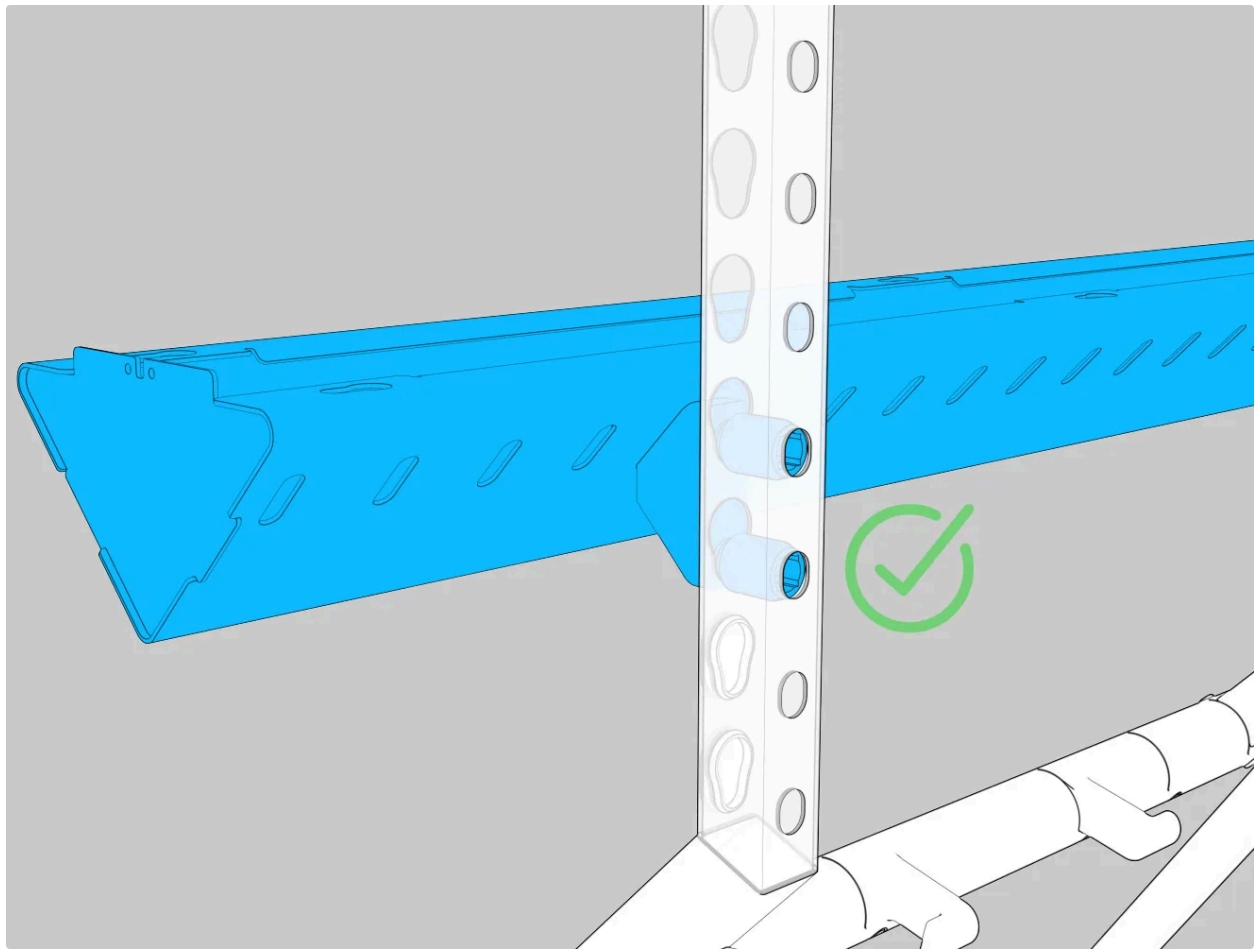

- 💡 You may find it more convenient to first install your display to the rolling stand. Then calculate the clearance required between the display and shelf for the equipment you intend to place atop the shelf.

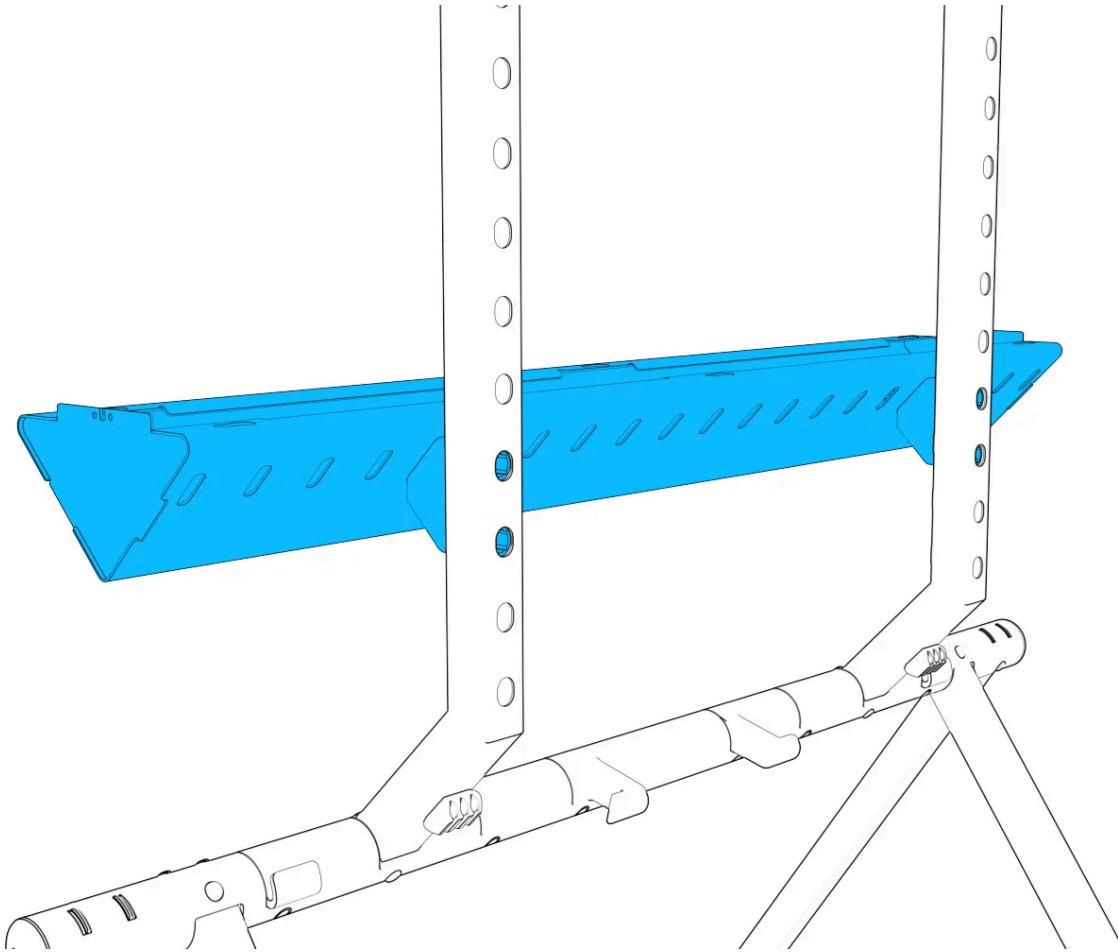

Lower tray's mounting anchors onto both columns.

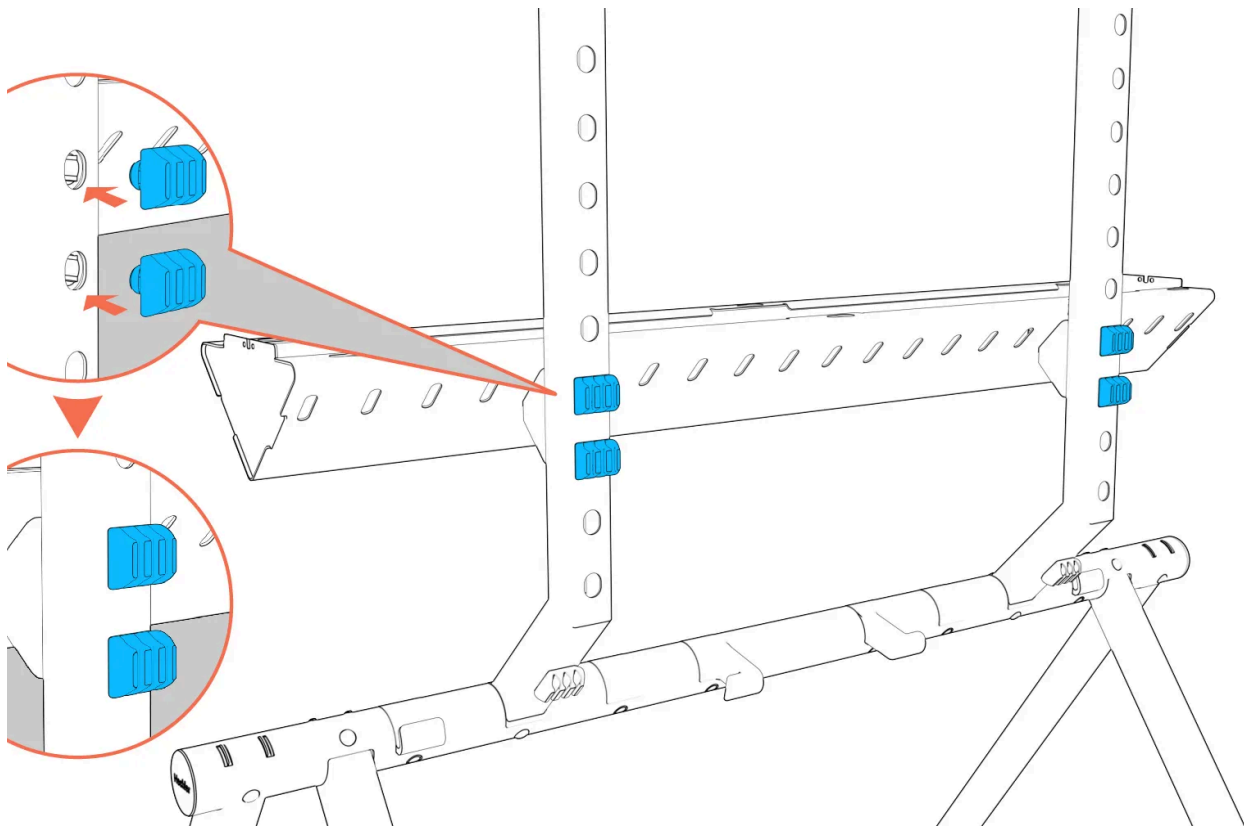

Insert four cable managers into the backside of the mounting anchors to lock tray to the columns.

💡 When properly inserted, the cable managers should be fully seated against the rear surface of the columns.

⚠️ Failure to install the cable managers could allow the hub to inadvertently dislodge from the columns which could cause equipment damage.

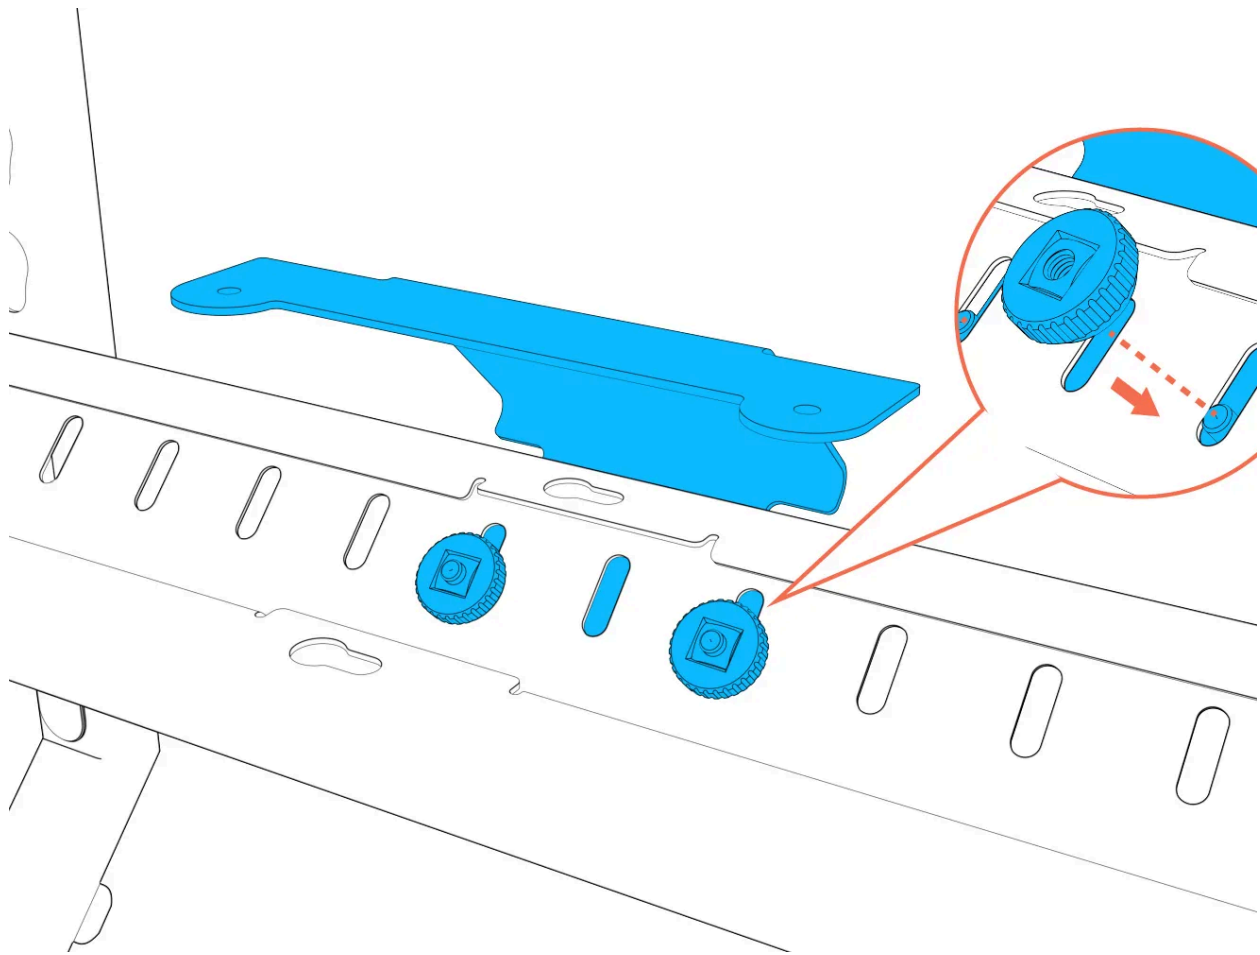

Load your gear

Install camera mounting bracket (optional)

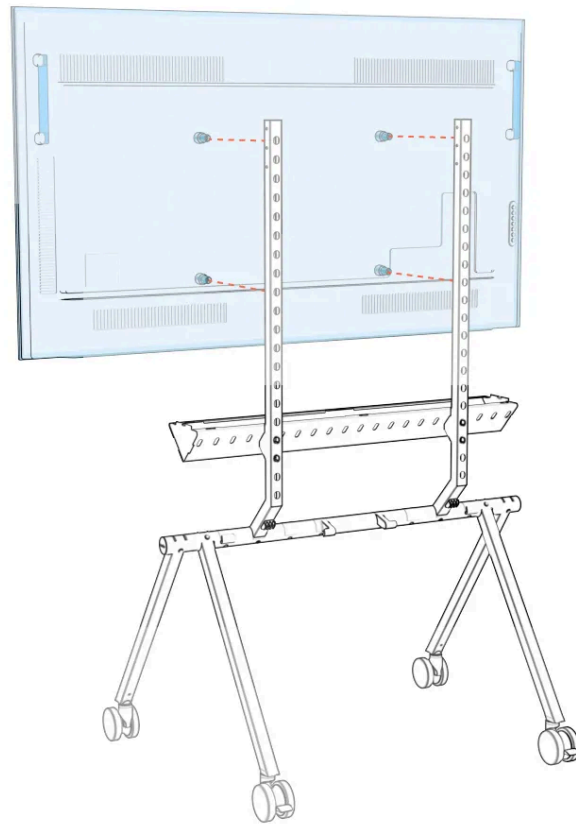

- 💡 Mounting a Logitech Rally Bar, Rally Bar mini, or Rally Bar Huddle above the shelf top using **H1042 Rally Bar Mount for Heckler Mobile Fleet** enables you to access your tray contents without removing your video bar.

If using H1042 Rally Bar Mount for Heckler Mobile Fleet (sold separately), fasten the mount to the tray as illustrated.

Install display

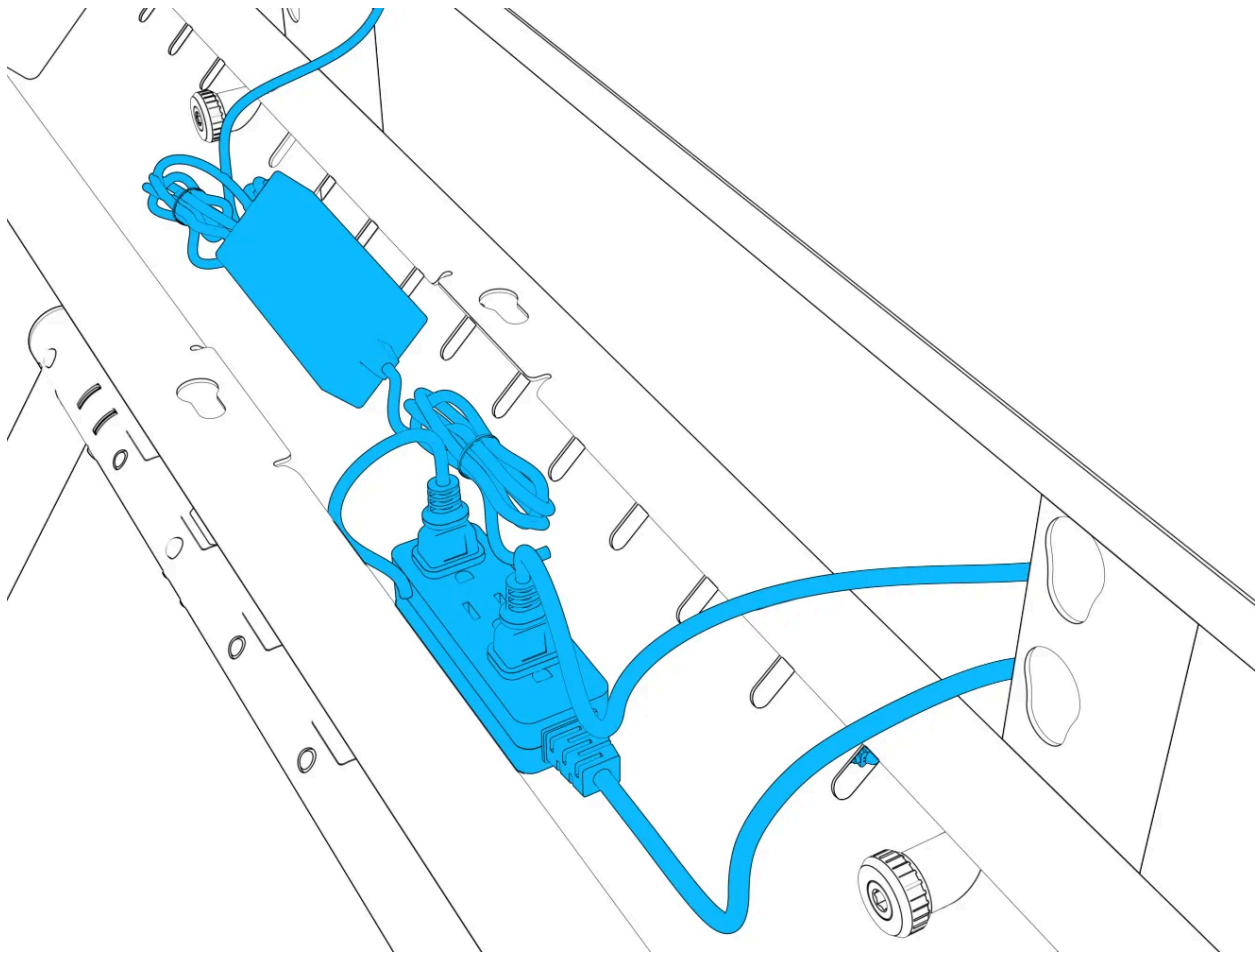

If you have not already done so, install your display to the columns of the rolling stand. Follow the procedures and safety instructions detailed in the user guide for your rolling stand.

Place components and cabling in the tray

Place power strips, power adapters, and other small devices into the tray.

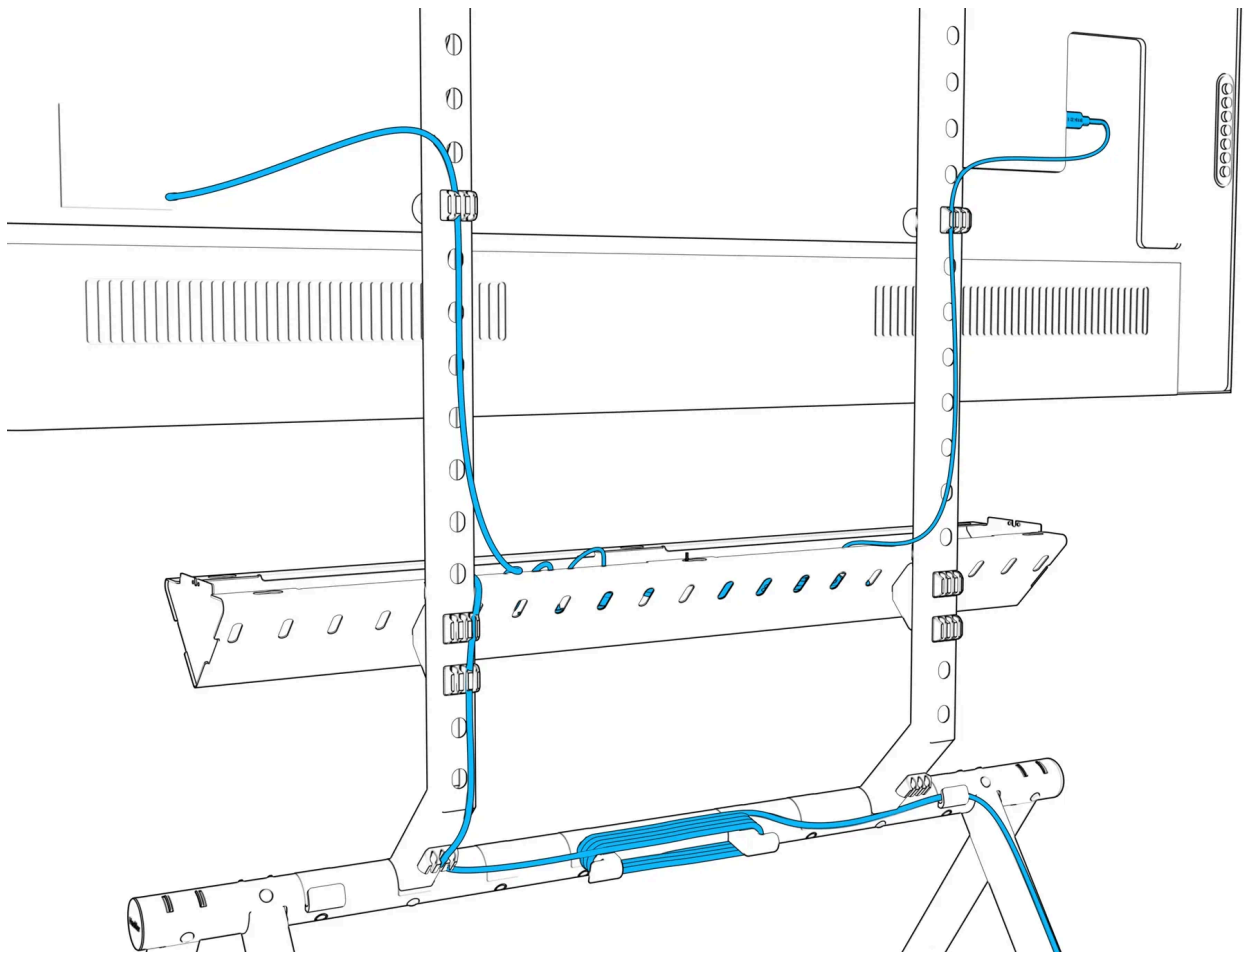

Bundle extra cabling and place inside the tray.

Route cables into and out of tray

Extend the cables for your video bar, touch controller, and display display over the outer edges of the tray.

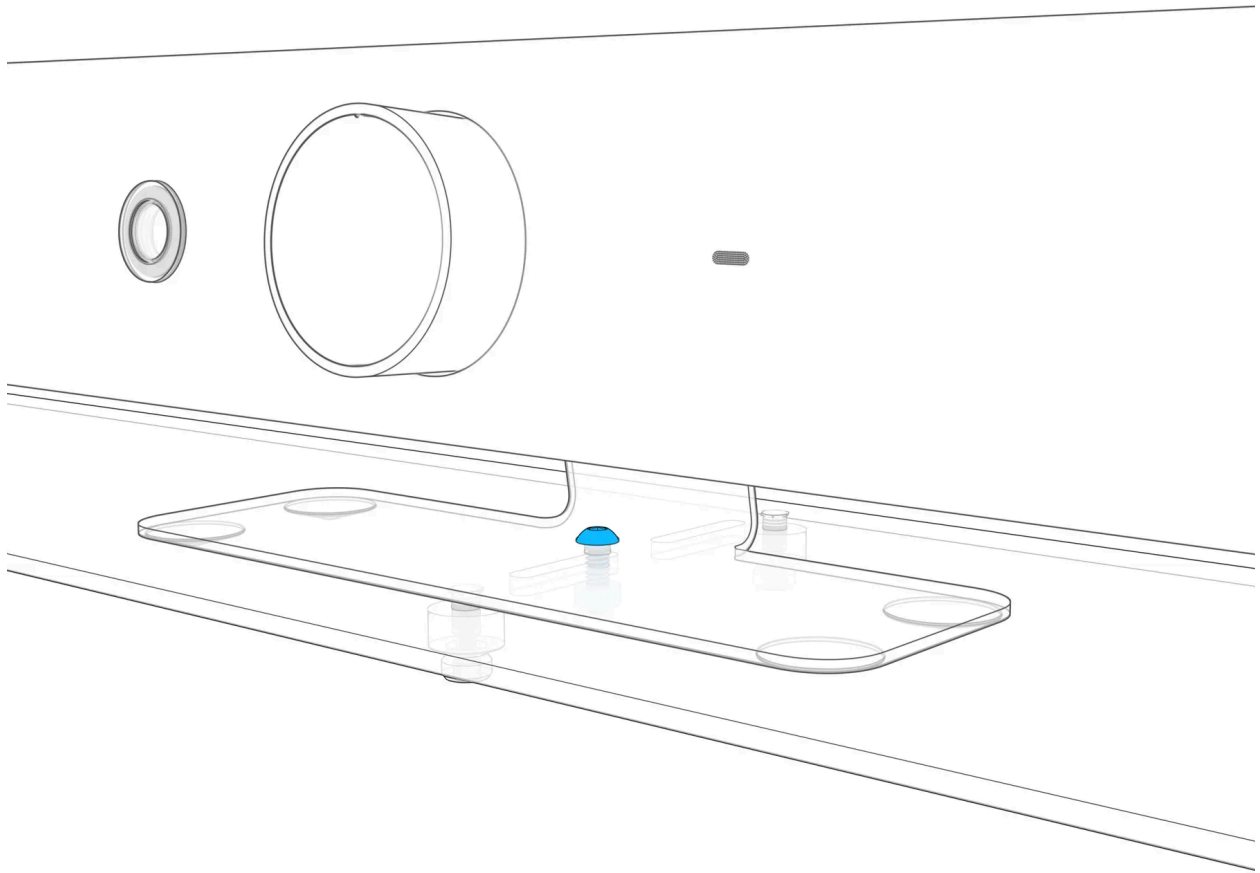

Connect cables to your display(s). Route cables from the display through the cable managers then store extra cabling in the tray.

Mount video bar or camera to shelf top

- 💡 The shelf top's surface features slots for attaching video bars, PTZ cameras, and other cameras directly using standard 1/4-20 screws (not included). Be sure to secure your camera to the shelf top before attaching the shelf top to the tray.

Fasten your camera to the shelf top using 1/4-20 hardware (not included) that works well with your PTZ camera or video bar.

Install shelf top to tray

Lower shelf top onto the tray.

- 💡 Ensure all six mounting anchors engage with the keyholes in to the top surface of the tray.
