

BRAVIA

DEVICE MANAGEMENT PLATFORM

PROFESSIONAL DISPLAY SOLUTIONS

Take control of your BRAVIA Professional Displays, no matter their location.

Now you can manage BZ-L Series BRAVIA Professional devices and applications without complexity. Easily and remotely update firmware, applications, device settings and configuration profiles from any connected, HTML-enabled device.

Centralized management for all your devices

Connect, control, and update your BRAVIA Professional Displays with ease. Our DMP helps you remotely manage any number of displays in real time, creating a dependable network of displays that generates automated reports. Reduce the total cost of ownership, without the burden of complex integration.

Scalable and secure display networks

Create device profiles that ensure your displays behave in exactly the same way, whether you have just a few devices or thousands. Keep customer networks secure, thanks to SOC 2 Type II and ISO 27001 compliance.

Better control for any device

Our DMP was designed to give you consistent performance across your display network. Enjoy powerful and intuitive device management tools that make reactive maintenance and proactive management simpler.

Device provisioning

Install our core app, add your device, and unlock new possibilities across your network of displays. Let automation combine processes into one smooth, hidden workflow, simplifying set-up, configuration, and management.

BRAVIA

DEVICE MANAGEMENT PLATFORM BENEFITS

Built for Sony

The only device management solution expressly designed for our BZ-J Series and later BRAVIA Professional Displays

Smart Maintenance

Black screen detection helps to ensure devices run with minimal interruption, while keeping maintenance costs low

Complete overview

View the status of entire networks of devices and control them in bulk through a single web-based dashboard

Use your tools

If you wish, take advantage of our extensive APIs to ingest device telemetry into your preferred operational tools

Central control

Our cloud management console lets you remotely switch applications, update software and firmware and more—all in one place. And you can create device policy settings that can be rolled out to every device at any time

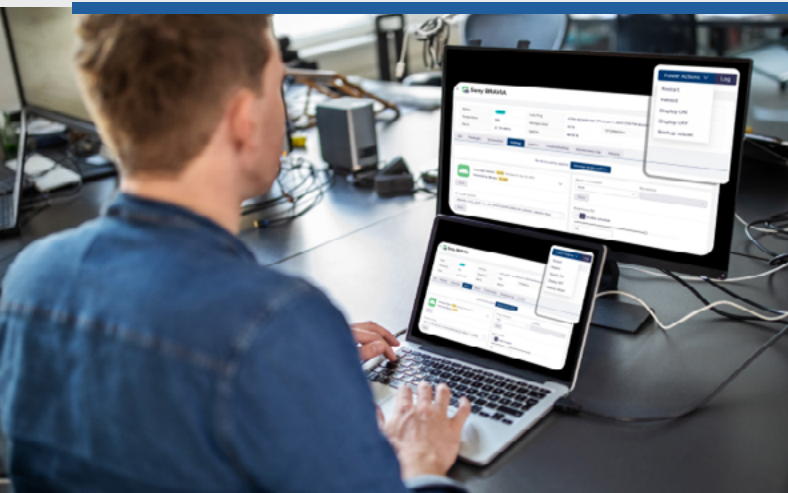

Rich experience

Create new experiences through our SDK, then track proof-of-performance, thanks to built-in analytics

More possibilities

Advanced REST API lets you test your applications and control your hardware like never before
